

EFFECTIVE 24/7 FOR THREE YEARS > PROFESSIONAL APPLICATION

Continuous Pathogen Protection

Be preventative, not reactionary.

Questions about mold dominate the field of queries by homeowners (27.9%) and mold lawsuits are up 800% over the past three years with over 10,000 pending mold lawsuits in the courts today (Insurance Information Institute).

Prevention costs can save anywhere from 2-12x the cost of reactionary remediation tactics. Worst yet, the spores are in the environment and any moisture will allow them to rapidly grown once again.

MicroShield 360™ can Ensure Mold, Mildew, Fungus and Bacteria are no Longer a Concern

The environmentally friendly innovative solution.

Our EPA registered and FDA approved coating system employs a unique technology that once bonded to a surface makes it completely uninhabitable by pathogens for three years with one single coating. Once applied, the MicroShield 360 coating creates a forcefield of microscopic spikes around the surface. When a spore or pathogen land on the coating it mechanically punctures the cell wall and applies a charge which neutralizes it.

- EPA registered and FDA approved
- Prevents over 90+ pathogens from living on surfaces
- Colorless, odorless, non-toxic and hypoallergenic
- One application lasts three years
